## IN THE CLAIMS

Claims 1-10 (canceled)

- 11. (new) A process comprising producing a catalyst preparation by comminuting a catalyst containing at least one inorganic compound which is solid under standard conditions with a dispersion unit into particles having a maximum average particle size d<sub>50.3</sub> of 2μm, implemented in accordance with DIN 66141 and DIN 66144, and is distributed at a concentration of from 1 to 50 wt.%, relative to the finished catalyst preparation, in a liquid.
- 12. (new) The process according to claim 11, wherein the catalyst is distributed in a liquid at a concentration of from 20 to 40 wt%, relative to the finished catalyst preparation.
- 13. (new) The process according to claim 11, wherein the solid inorganic compound is at least one compound selected from the group consisting of titanium dioxide, titanium-dioxide-containing substances, titanates, zeolites, aluminum oxide, boron oxides, germanium dioxide, antimony(III) oxide, cerium oxides, barium sulfate, zinc sulfide, and silicon dioxide.
- The process according to claim 13, wherein the solid inorganic compound is at least one compound selected from the group consisting of hydrated titanium dioxide corresponding to the composition y  $TiO_2$  'z  $H_2O$  (where y = 1, z = 0.01 to 2), and a titanate corresponding to the composition  $(Me_nO)_x$  ' $(TiO_2)_y$  ' $(H_2O)_Z$  (where Me = Li, Na, K, Rb, Cs, Mg, Ca, Sr, Ba; n = 1 for Me = alkaline earth metal and n = 2 for Me = alkali metal; x = 0.0001 to 6; y = 1; z = 0.01 to 2).
- 15. (new) The process according to claim 11, wherein the particles have a maximum average particle size  $d_{50.3}$  of 1  $\mu m$ .
- 16. (new) The process according to claim 11, wherein the following said unit selected from the group consisting of a stirred ball mill, an ultrasonic homogenizer, an ultrasonic

25665289.1 -3-

disintegrator, a high-pressure homogenizer, dispersing equipment based on the high-power pulse-type technique, dispersing equipment based on the impact jet process and an impact stream-type mill.

- 17. (new) A process according to claim 11, wherein the liquid is at least on liquid selected from the group consisting of water, a C<sub>1</sub>-C<sub>20</sub> alcohol, a diol, a carboxylic acid and a fatty acid.
- 18. (new) A method comprising performing a condensation reaction, a polycondensation reaction, a transesterification of an ester, a transamidation of an amide, a rearrangement or an olefin polymerization with the catalyst preparation prepared by the process of claim 11.
- 19. (new) A method comprising performing a photocatalysis reaction with the catalyst preparation prepared by the process of claim 11.
- 20. (new) A method comprising boosting the effect of a catalyst enzyme system with the catalyst prepared by the process of claim 11.
